GDD KEY

WHITE is implemented in the engine!

GREEN is wanted but not implemented!

YELLOW is still up for debate/design discussion!

RED has been discussed and decided to be dropped (kept in the doc just in case)!

CHVMBER

Game Overview

"A FPS-Roguelike where instead of upgrading the player, you upgrade each bullet!"

Initial Concept

- Roguelike FPS around bullet upgrades
- Player Upgrades are tied to the bullets
    - E.g. To heal, you need a "healing bullet"
- Bullets are in a revolving chamber, so players can build multiple different bullets
- Craft a run to get as far as possible / reach the end
- Space Cowboy Theme

Genres

FIRST PERSON – Aiming, position, mid-paced, hoard management

ROGUE LIKE/LITE – Build Diversity, "runs", power scaling, permanent unlocks / progression

Target Audience

Movement Shooter Fans – Less Realistic

Roguelike Fans – Try die repeat, feeling of growing stronger

Intuitive / New player friendly – Simple controls, easy to pick up

Core Gameplay Pillars

Chamber Progression / Modularity – Many different upgrades / fun decision making / heavy upgrade synergy.

Smooth Flowing Combat – Refined general FPS movement / not much downtime in a wave / as little Jank as possible!

Balanced Player Agency to Randomness – Players have control over runs / enough randomness to encourage different runs

Build Possibilities and Breaking Expectations – Upgrades encourage unique builds / don't be afraid of player getting "too strong" (unless done EVERY time)

Stylisation, JUICE and "feeling awesome" – Player should feel like a BADASS / impact through VFX, sounds, camera shake etc.

CHVMBER

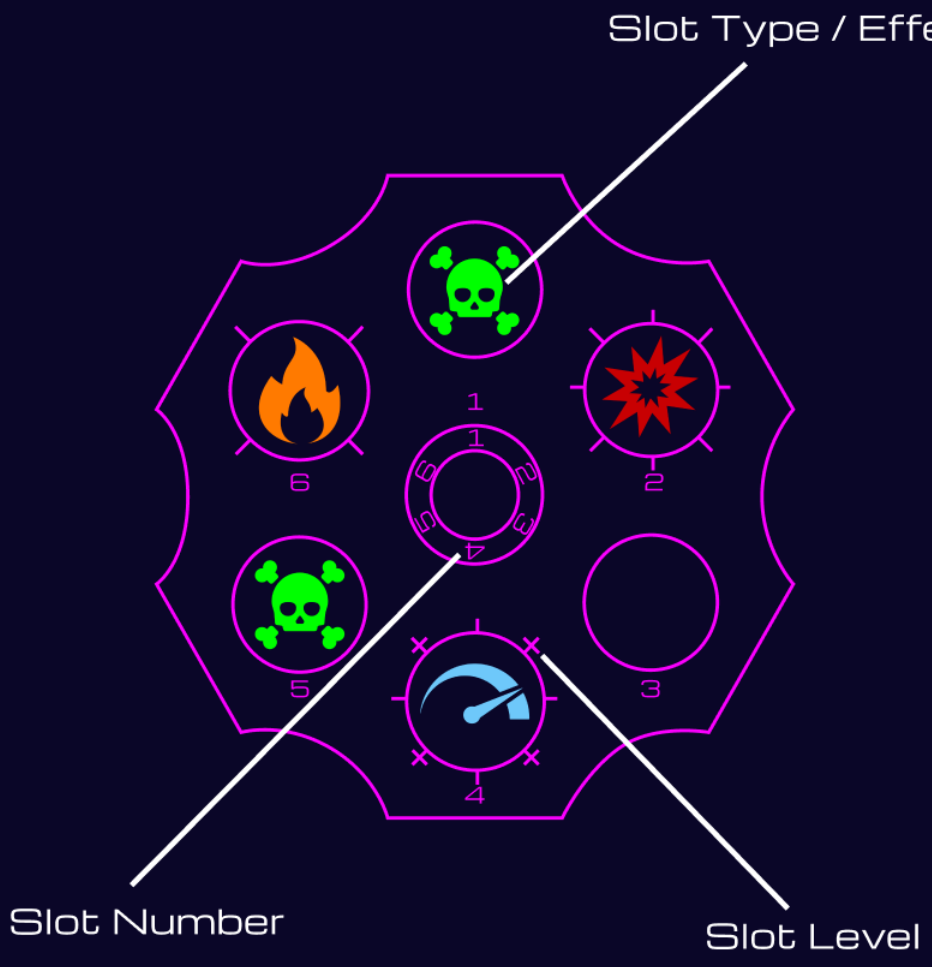

Core Mechanic

An outline of the core mechanic to make the rest of the lingo make sense!

The Chamber

- Player has 6 bullet slots
- Upgrade these slots to have different effects
- Every bullet coming out of that slot gains the effects
- Chamber cycles when shot
- Reload will hold the same slots

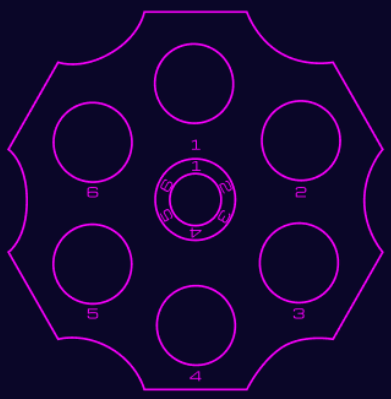

CHVMBER

- Start with 6 “blank” slots
- Upgrades: Replace blank slots with effects
- Slots can be upgraded further to increase the power

Empty Chamber - Start of Game

Game Progresses

Game Progresses Further

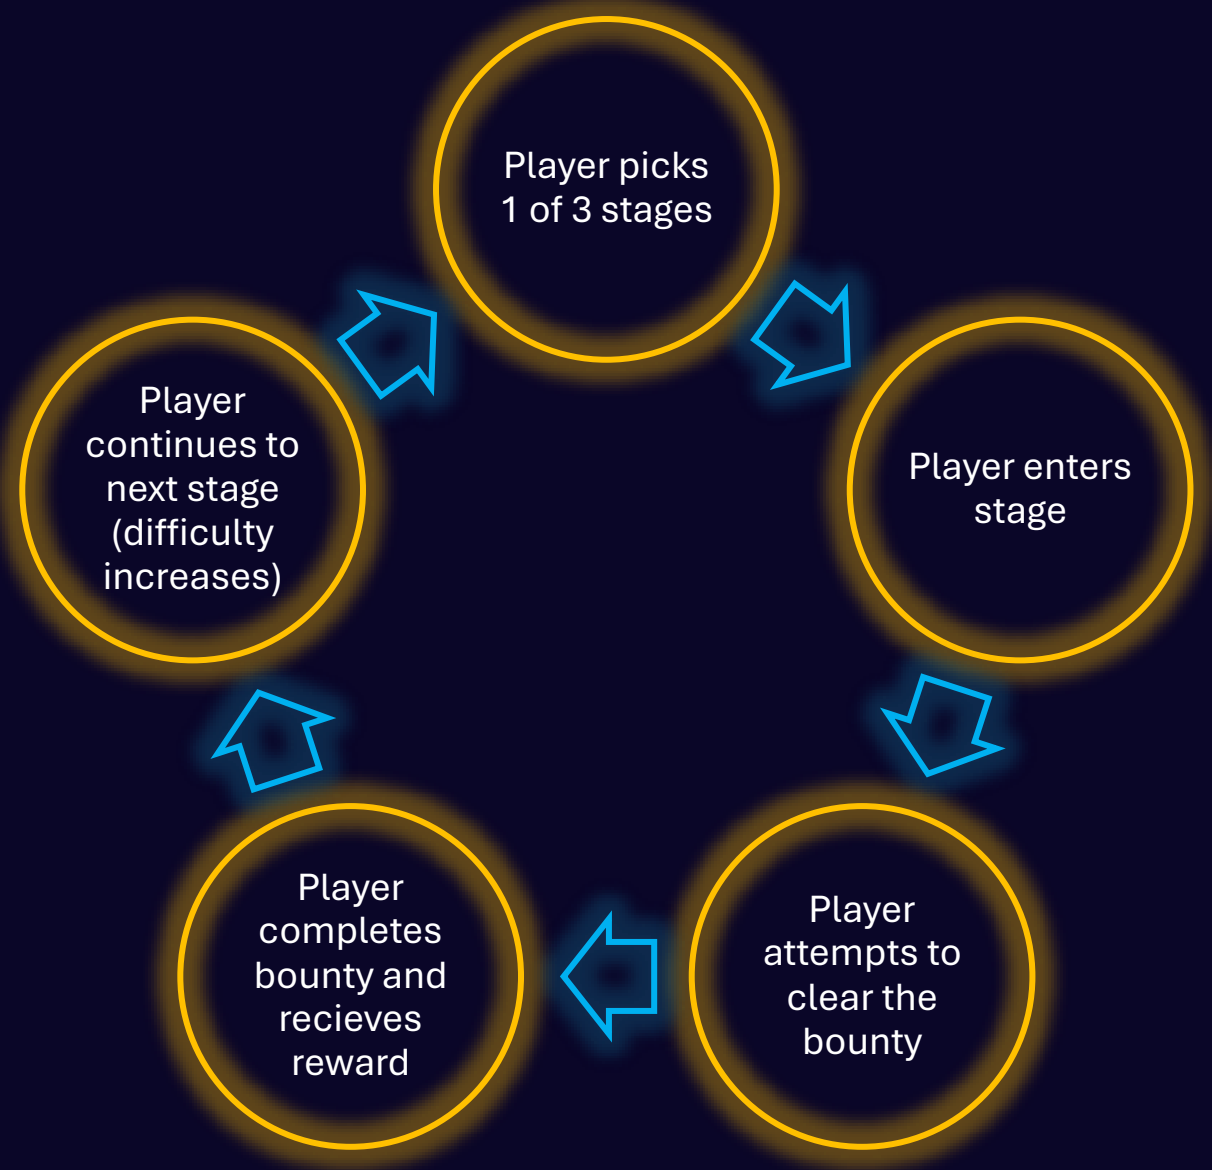

CHVMBER

Game Loop

An in-depth description of the Roguelike / Level progression system!

THIS WHOLE SECTION IS PURELY THEORETICAL SO FEEL FREE TO CHANGE!!

General Game Flow

Player Picks 1 of 3 Stages

- Choose 1 of 3 stages for next level

Stages each have these factors below:

Enemy Bounty and Icon – Enemy gang Type of that stage

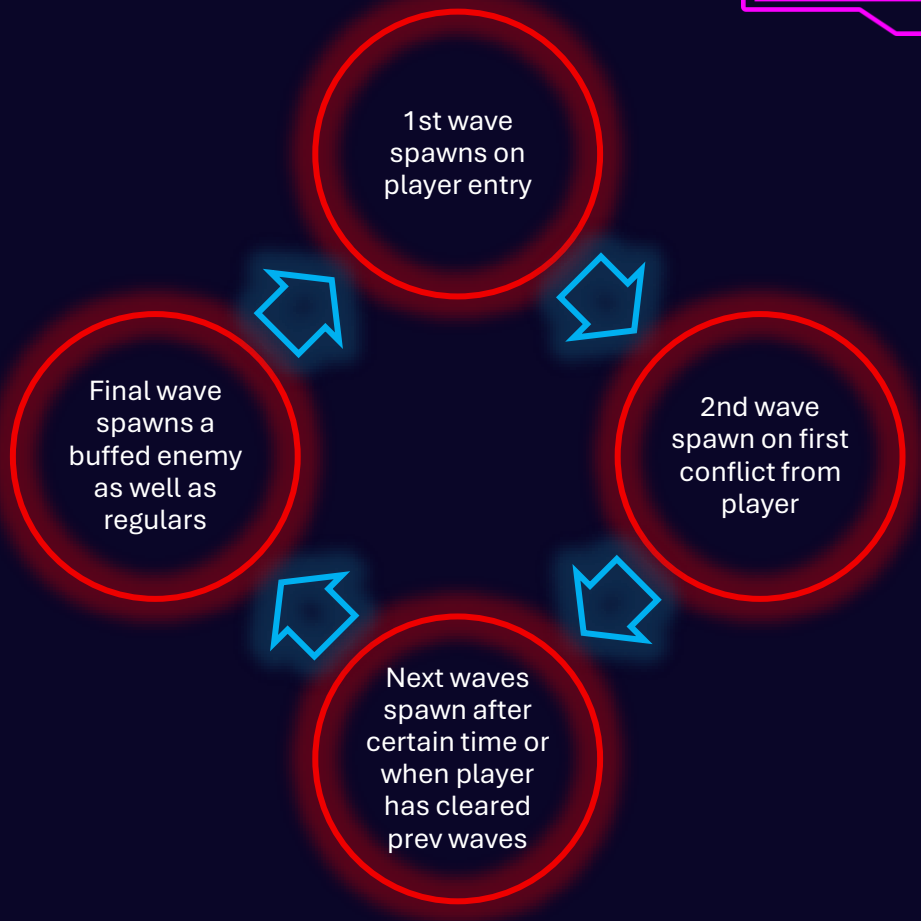

Difficulty / Modifiers – Modifiers to the enemies or environments to make them more difficult

Stage Location – What pre-built level it will be / what environment it will be

Rewards – The rewards for completing the level

Bounty System

Player Receives Reward

- The player gains the rewards associated with the stage they chose.

Reward Brainstorms

- **Shops and Vendors –** Unique effects where the player will pay a cost to gain a more unique reward, allowing them more agency over their run.
- **Miscellaneous –** Other minor rewards that provide value to run in less direct ways. E.g. increasing a bullet's base stats
- **Bullet Reward** Here the player will receive a choice of 3 items. Each item can either be a new bullet slot (that can replace a 'blank' bullet) or an upgrade to a pre-existing bullet slot in their chamber.

Short-term difficulty – Within a singular run

- Player must try to outpace the difficult
- Game not planned to be infinite
- Difficulty scale should be exponential (like the player's power)

Long-term Difficulty – Rogue-lite elements

- Rogue-lite elements to assist struggling players
- Should not be expected to win on their first run

CHVMBER

Gameplay Mechanics

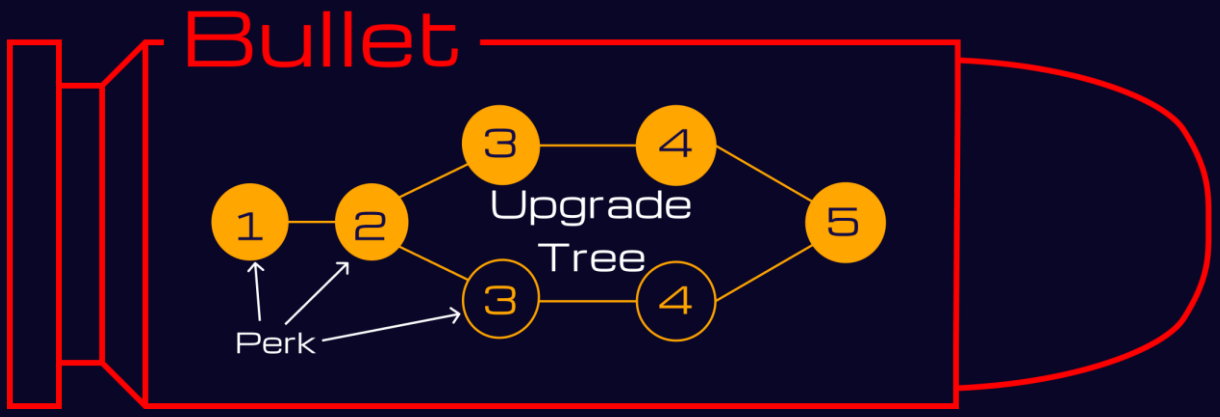

A description of the different mechanics and how they will affect the player's gameplay.

Bullets, Perks and Keywords

-Player's can acquire new bullet slots

- Player's can upgrade these slots further using an upgrade tree

- All Perks have **Keywords** that are conditions for the perk to activate.

All Keywords listed below:

On Shot – When the bullet is shot

On Hit – When the bullet hits an enemy or surface

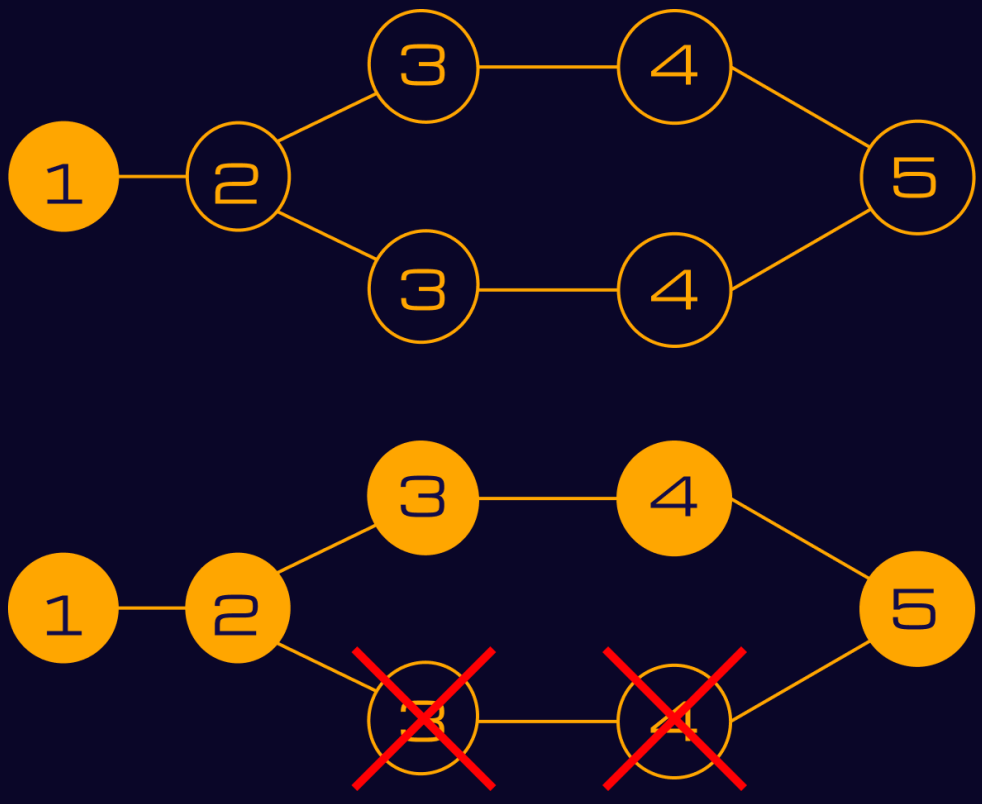

On Loaded – When the bullet is the next one to be fired

In Chamber – When the bullet is in the chamber

Bullet Slot Upgrade Tree

- Maximun of 5 levels to the upgrade tree
- Brnaches in the tree lock out other branches

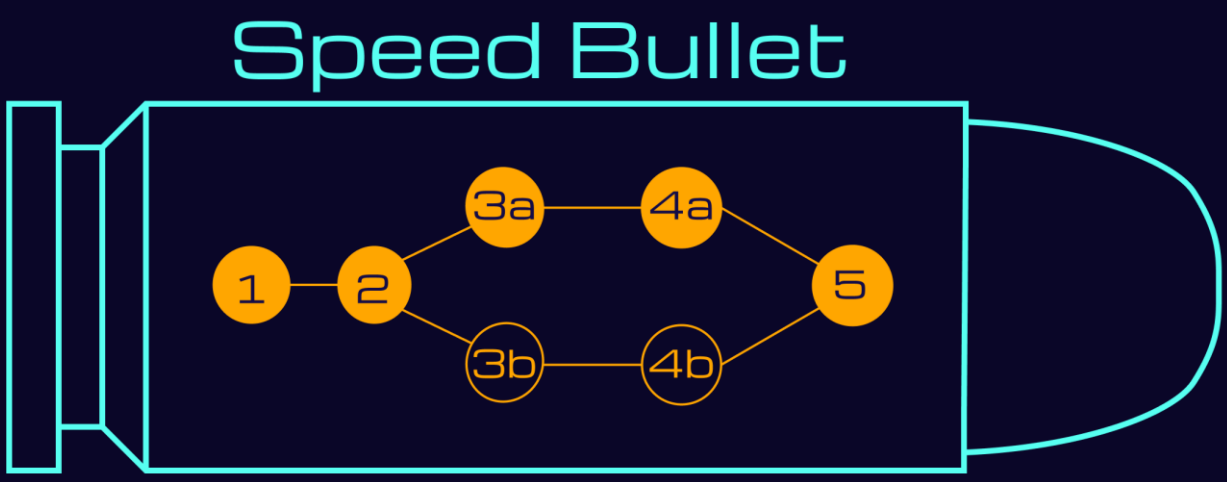

Upgrade tree example:

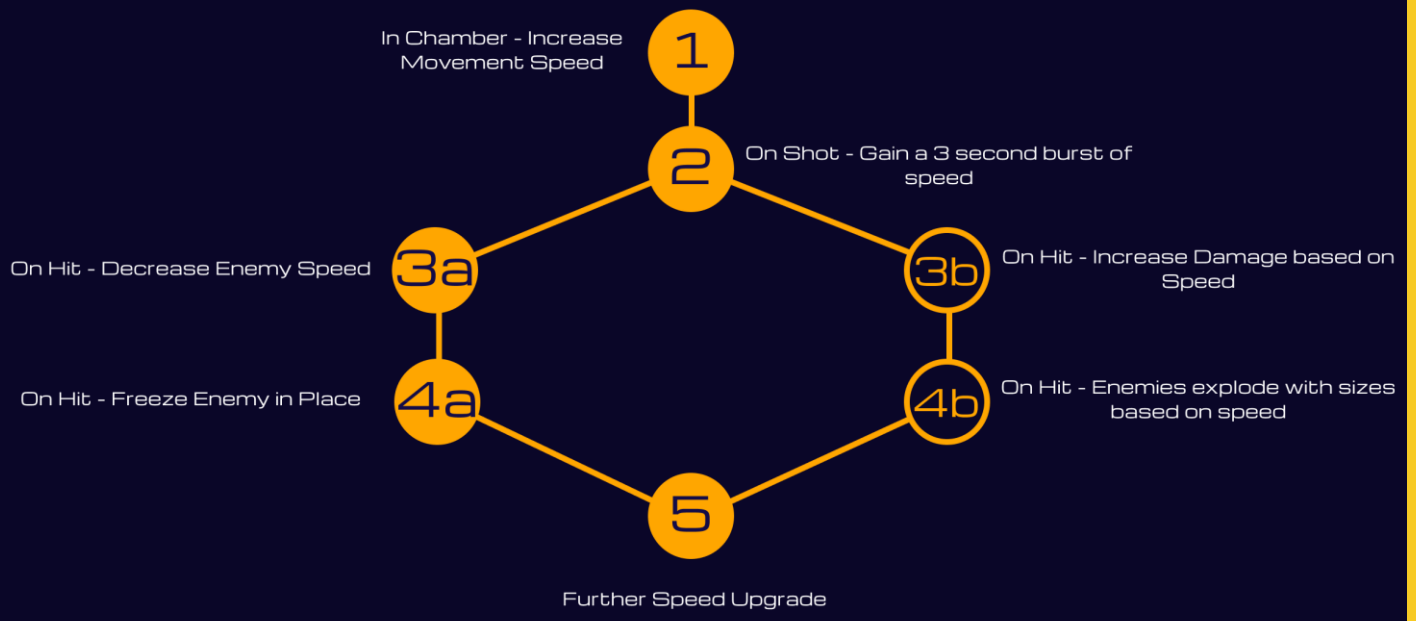

- Perks in the same branch should lean into each other

Full Bullet Example:

Additional Perk Ideas can be found in this Document: CHVMBER - PERK LIST.docx

Vendors

THIS WHOLE SECTION IS PURELY THEORETICAL SO FEEL FREE TO CHANGE!!

- Rare reward that allows you to gain strong rewards for bullets slots
    - E.g. Buy a strong bullet slot for two bullet slots
    - E.g. Duplicating a bullet slot
    - E.g. Combining bullets to make a stronger variant

Enemies / Enemy Gangs

Enemies should be relatively manageable on their own however become more threatening as if they gain numbers over the player.

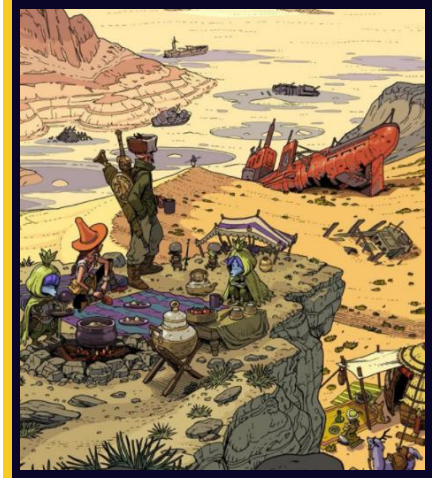

Enemy Gangs

- Gang based on the stage selected
- Can be a mixture of multiple enemies types (i.e. cacti and robots etc).

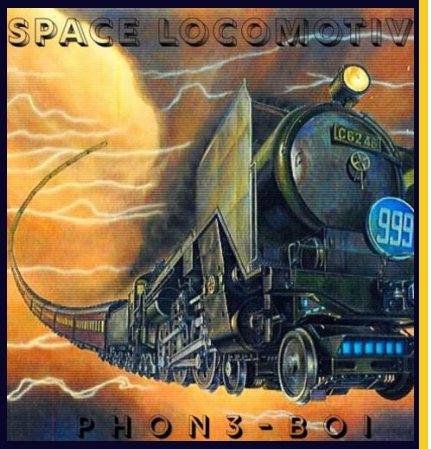

Look and Feel

Visual Themes

- Space Cowboy
- Scruffiness, rusty metal. Scrappy, NEON / LEDS

Art-Style

- Cartooney
- Cel Shaded / Darkened edged for a small bit of grit
- Hand Drown details

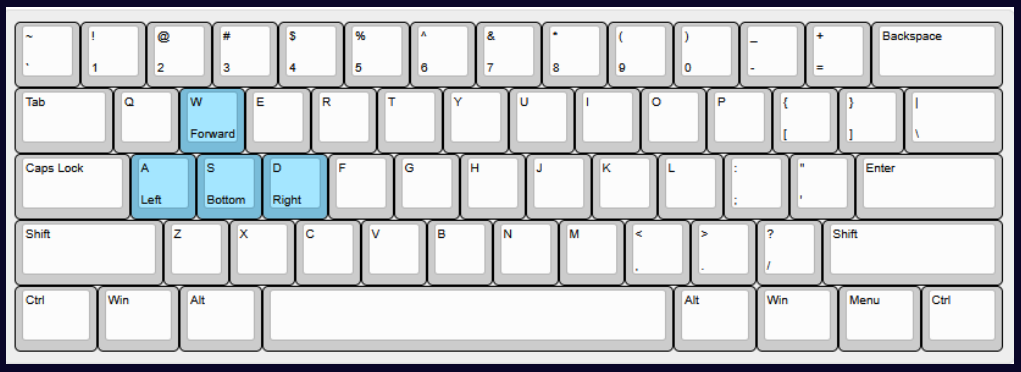

More details can be found here: Oatcake Interactive - Chamber Art Bible.pptx!

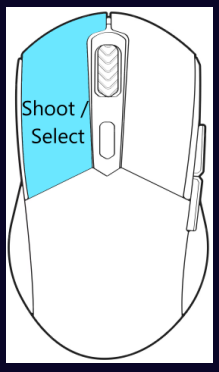

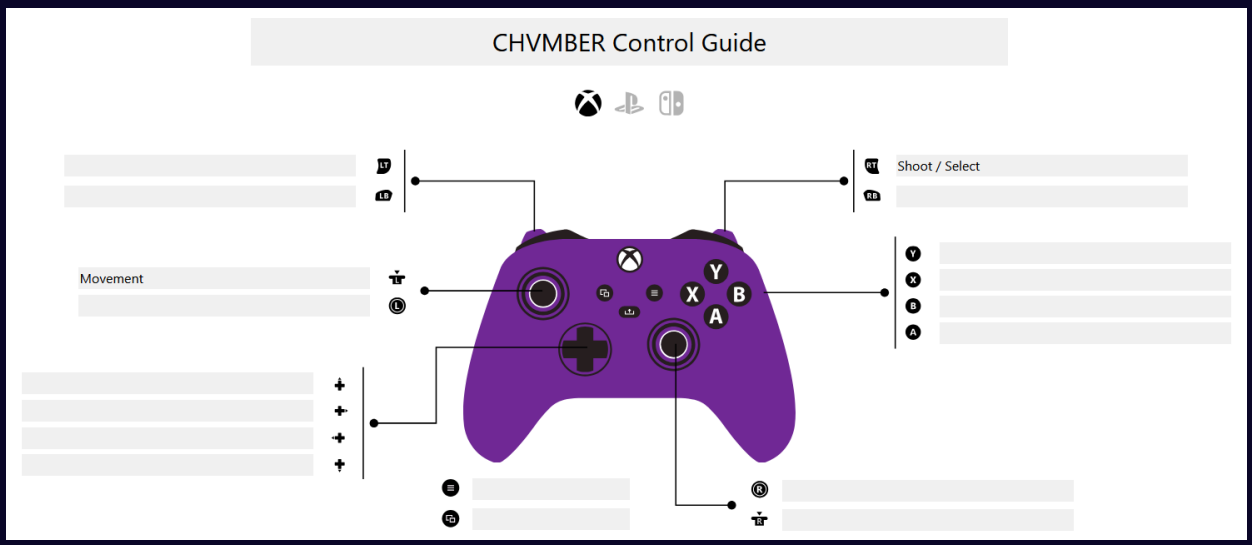

CHVMBER

Controls

- Pick up and play focused
- Should not be too many controls
- If game feels TOO simple, be open for Jumping / Aiming / Relaoding etc.

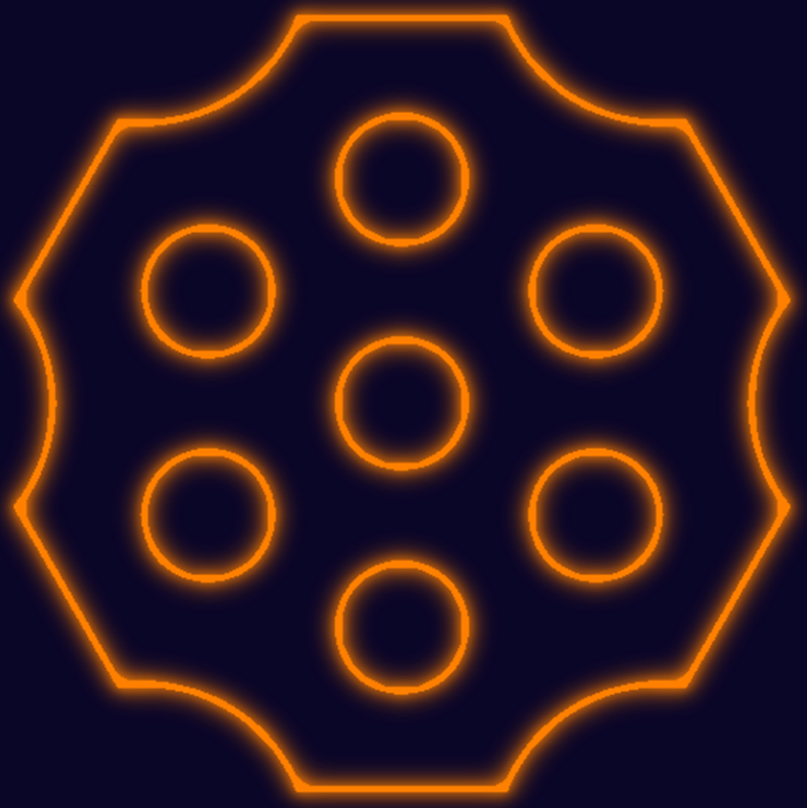

Story and Lore

- So far we got nothing XD
- Going for gang to gang trying to collect enough money to…
