

# CHVMBER

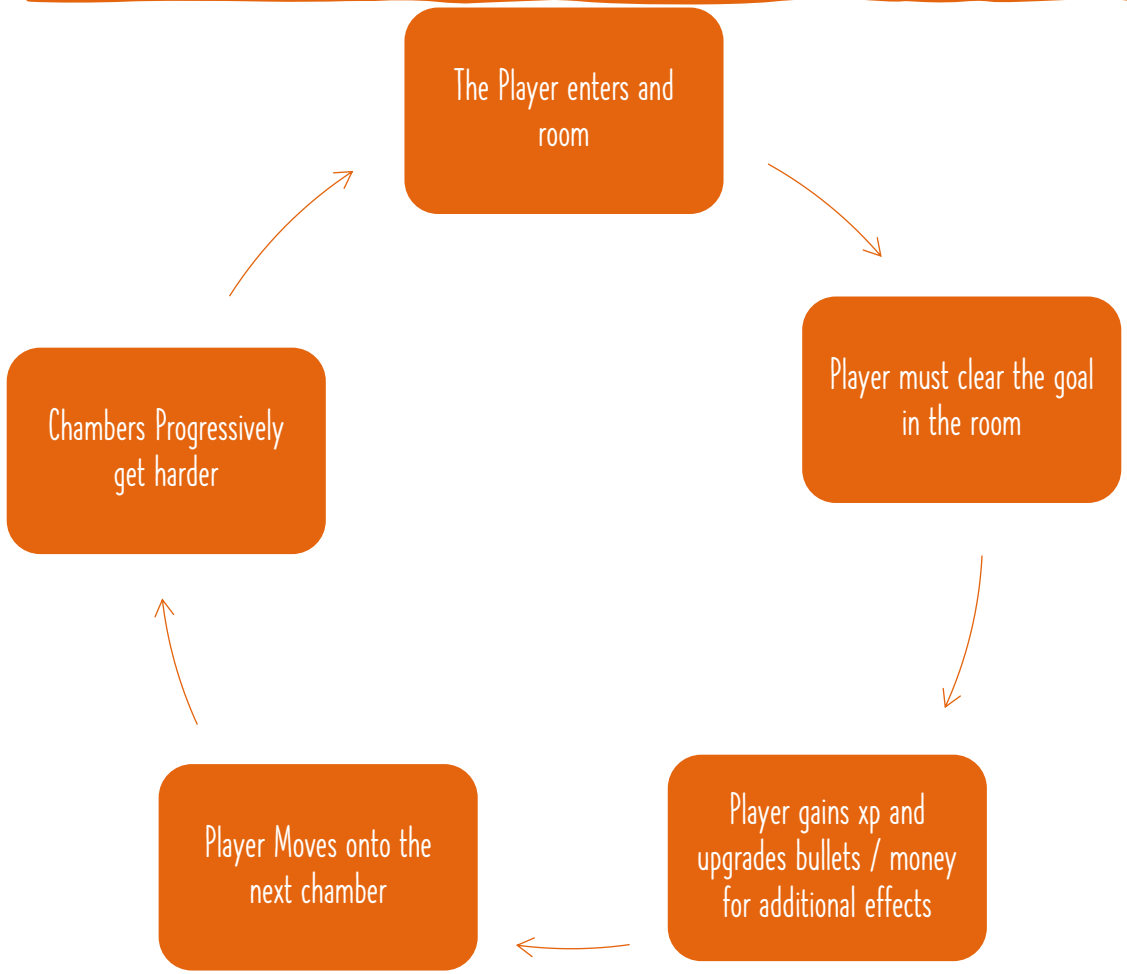

"A roguelike 1st person shooter where you upgrade each bullet in your chamber"

# INTRODUCTION

- Chvmber's core concept involves a wave like shooter where every aspect of the combat revolves around the individual bullets in your CHVMBER
- Even aspects like healing, movement and general abilities only occur when shooting bullets.
- When the player level-ups, they upgrade a singular aspect of a bullet that will give them benefits
- Overtime the player must power their bullets up enough to beat the final chamber in a dungeon or last as long as possible

# GAME LOOP

# ROOM GOAL IDEAS

- Defeat all enemies in X time
- Stay in the zone for X time
- Defeat X type of enemy X times
- Defeat the Enemy spawners
- Survive for X amount of time
- Collect the X amount of Flags

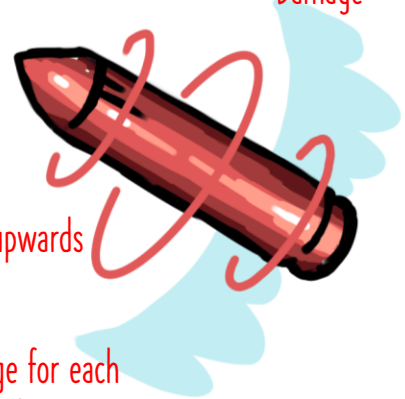

# UPGRADE IDEAS

- These are some ideas of upgrades, each bullet point is an individual upgrade that can be added
- I have given each bullet 2 upgrades for now; however, each one could potentially have more depending on how we would want to do this!

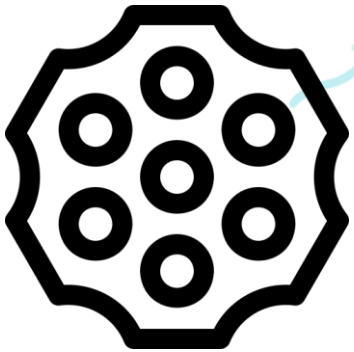

- Other fun upgrades could include: Increase Chamber size (at a big cost)
- Expanding Upgrade slots per bullet
- Duplicating an already-made bullet

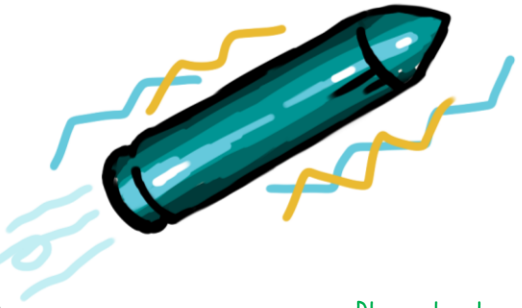

- Gain Bonus money for killing an enemy with this bullet
- Deal Bonus Backstab Damage

- Launches Player upwards when fired
- Deal Bonus damage for each Red Bullet in your Chamber

- Inflict Stun to an enemy for 1 second
- Player has bonus speed for the next 3 bullets fired

- Player leeches life of the hit enemy
- Shot is split into 3 shots fired in a cone

- Bullets apply poison to an enemy
- Firing this bullet provides a slight heal

- This bullet has a slight homing effect
- Reloading on this bullet makes the reload twice as fast

# ADDITIONAL INFORMATION

## Base Player Character

- Potentially give them a dash or secondary ability along with a gun for some varied gameplay (?)
- Make sure the base character is weaker / basic

## Bosses / Scope

- Most likely avoid bosses, as we don't have the team for it
- Enemies should be some kind of simple / easy-to-animate design (Robot, Geometric)
- 1st Person to reduce need for animation further
- Modular way of adding upgrades to reduce scope

## Controls

- Standard FPS controls for simplicity
- Single Player
- PC and potentially controller if needed

## Art / Visuals

- Once ONCE again keeping it simple and chill
- Focus on reducing animations as much as possible, especially in enemies
- Honestly open to ideas here!
